Legiones Astartes General Traits

The legions Astartes (Space Marine Legions) are the key faction of battles waged in the Age of Horus. The following traits apply to all space marines:

1. **This faction base to hit value for ranged and close combat is 5+**
2. The default damage rating [DR] for all elements is 1. In cases where the element has more than 1 [DR] will be noted on that elements Statline in the Notes section.
3. Tenacity – All space marine infantry elements may reroll a failed morale check if the formation is within 6cms of an objective.
4. Librarius – Before the beginning of the Horus Heresy certain primarchs would not permit the use of the librarius within their legion. This is noted under the specific legions below. Games taking place prior to the Heresy should follow those restrictions. Games played during the events of the Heresy should have these restrictions lifted and permit the use of the Librarius in all Legions.
5. Veterans – In addition to the veteran [V] ability astartes veterans gains a combi-weapon as basic weapon (no ranged weapon for assault infantry), they receive a higher close combat to hit value (+1 to hit bonus) and the melta bomb upgrade (OR jump packs for assault infantry). Command elements gain this ability as a free upgrade.

Astartes Armor Options

The base Statline for all astartes abstracts things like actual armor type worn. The rules are optional and if both players agree beforehand these options for more detail as to armor type the legionnaires wore are recommended:

- Power Armor Variants
 - Mk II Power Crusade Armour. Armor Save 5+. Slow move, -5cms on charge orders
 - Mk III Power Iron Armour. Void Hardened. Armor Save 4+. Slow move -5cms on charge orders.
 - Mk IV Power Maximus Armour. Default stats
 - Mk V Power Heresy Armour. Default Stats
 - Mk VI (Corvus) Power Armour. Armor Save 5+, standard 10cm move. Recon elements keep their abilities if wearing this armour.
- Terminator Armor Variants
 - Cataphractii Pattern Terminator Armor. Invulnerable save increases to 4+. Slow move, -5cm on charge orders. Armor save 3+, invulnerable save 4+
 - Tarterus Pattern Terminator Armor. Gains Agile [AG] ability. Armor save 3+, invulnerable save 5+
 - Indomitus pattern. Armor Save 3+, invulnerable save 5+

There is additional cost to formations using these optional rules.

Upgrade Cards

All legions may access general Upgrade Cards as well as use those Upgrade Cards specific to their legion. Most information will be noted on the Upgrade Cards; however, some require additional description beyond that stated on the card.

- Phosphex – Replaces the standard artillery attack. Each element gains blast 3. Attack ignores cover [IC], -2 save modifier. Attack can cause fires. Phosphex fires add a +2 to the fire table roll.
- Radiation – Replaces the standard artillery attack. Each element gains blast 2. Attacks ignore cover, -1 save modifier. A terrain piece or structure hit by this attack gains the lingering death [L] trait. In the end phase on a roll of 7+ the effect dissipates. Add a +1 to this roll for every turn beyond the first for rolls to dissipate this effect.

Legion Specific Traits

Players can use only the general astartes traits above for generic play if they wish, using only the general astartes army cards. However, for a more complete experience we suggest using the legion specific traits and elements as that is the default game assumption.

All Legions have a faction value of 400 for purposes of faction advantage (see core rules).

Librarians, when used, would also form part of this wing.

Glossary

Helpful tidbits on abbreviations and how to read certain shorthand that is uniform throughout the books and tables.

How to read Statline notations

While much of a Statline is self-explanatory, we have added many shorthand notations to convey more information to the player with minimal amounts of cross referencing. The notations are standardized and are also mentioned in the core rules.

Pinning class

In the legion general element section, next to each section type you will see a number in brackets. This number is the pinning class as described in the core rules. Examples:

Vehicles [3]: This means all the elements under this section have a pinning class of 3.

In the legion specific element, ONLY elements that are a pinning class greater than 1 (pinning class [2] or higher), will be specified in the elements note section

Rylanor the Unyielding: In the notes section it will read Pin [2], which means pinning category 2. All entries with no entry are a default Pin [1] (infantry).

Movement Modes

All movement are listed with a number which is their move in cms. In some cases, elements have a special movement mode. Those with special movement modes will have a letter notation immediately after the number to point out what special movement mode it has. Examples:

15J: This means the element has a base move of 15 and jumpacks [J].

10T: This means the element has a base move of 10 and can deep strike [T]

30K: This means the element has a base move of 30 and is a skimmer [K]

20TN: This means the element has a base move of 20 and is a tunneler [TN]

20TK: This means the element has a base move of 20 and can deep strike [T], but also is a skimmer [K]

Transports and their capacity are mentioned in the notes section.

Armor

When an element has an invulnerable save, it will be listed in brackets next to its standard armor save value. Examples:

5[8]+: This means the element has an armor save or 5+ and an invulnerable save of 8+.

3[6]+: This means the element has an armor save of 3+ and an invulnerable save of 6+.

Weapon Traits

When a weapon has a special trait, it will be listed next to the weapons name in full form (in parenthesis) or in brackets with its notation as space permits.

Heavy Flamers (Assault) or [A]: This means the weapon has the assault [A] trait.

Culverins (Volkite) or [VK]: This means the weapon has the Volkite [VK] trait.

Bonus to damage table roll or [Dmg+x]: Weapon has a damage bonus of “x”, “x” equals the bonus to the roll.

Bonus to Structure damage table roll or [Str+x]: Weapon has a damage bonus of “x”, “x” equals the bonus to the roll.

Attack Dice

Weapons may have traits that require listing their attack in a form other than a number to indicate its attack dice. The two most common ones are attacks with blast and twin-linked weapons. Examples:

B0: This means a blast 0 attack. It has its primary die with a TSM listed in the appropriate column, but zero secondary dice.

B2: This means a blast 2 attack. It has its primary die with a TSM listed in the appropriate column and 2 secondary dice with a TSM of -1

2xB2: This means TWO, blast 2 attack. Each has its primary die with a TSM listed in the appropriate column and 2 secondary dice with a TSM of -1. Resolve each attack separately.

See the core rules section on blast dice for more information.

2TL1: This means a twin-linked weapon attack where you have a total of TWO attack dice, but you can only target one element (means both attack dice are allocated to that one target).

4TL2: This means a twin-linked weapon attack where you have a total of FOUR attack dice, but you can only target TWO elements (means 2 attack dice to two targets).

8TL4: This means a twin-linked weapon attack where you have a total of EIGHT attack dice, but you can only target FOUR element (means each target gets two attack dice).

3TL1: This means a triple-linked weapon attack where you have a total of THREE attack dice, but you can only target one element (means all three-attack dice are allocated to that one target)

See core rules section on twin-linked weapons for more information.
